

RESIDENTIAL AND SMALL NON RESIDENTIAL STANDARD OFFER SERVICE CONSUMER INFORMATION ABOUT YOUR ELECTRICITY SUPPLY

January 2021

Electricity suppliers in Maine must, by Maine law, provide fact sheets, or “uniform disclosure labels” from time to time to educate consumers about their electricity service. Your electricity is *delivered by Versant Power – Bangor Hydro District*, but the electricity itself is supplied by:

New Brunswick Energy Marketing Q3 2019 33% and Q4 2019 33% and Constellation Energy Commodities Group Maine, LLC Q3 2019 67%, Q4 2019 67%, Q1 2020 67%& Q2 2020 67% and NextEra Energy Marketing Q1 2020 33% and NextEra Energy Marketing Q2 2020 33%

This fact sheet provides consumer information about the power sources and air emissions of service provided by the electricity suppliers.

Power Sources

(July 1, 2019 – June 30, 2020)

The suppliers provided electricity with the following resources:

	<u>Supplier's Mix</u>	}	<u>New England Mix</u>
Biomass	1.1%		7.9%
Municipal Waste	1.0%		
Fossil Fuel Cogeneration	01%		0.1%
Fuel Cells	0.1%		0.4%
Geothermal	0.0%		0.1%
Hydro	65.2%		7.2%
Solar	1.8%		4.5%
Tidal	0.0%		0.0%
Wind	1.0%		3.5%
<i>Other Choices</i>			
Nuclear	8.8%		26.0%
Gas	17.3%		44.60%
Oil	2.5%		5.4%
Coal	0.9%		0.3%
TOTAL	100.0%		100.0%

Air Emissions

(July 1, 2019– June 30, 2020)

This table compares air emissions from this supplier's electricity mix to average emission levels from all Regional power sources.

	<u>Supplier's Mix (lbs/MWh)</u>	
Carbon Dioxide (CO₂)	752.85	This is 1.51% less than the New England Average
Nitrogen Oxide (NO_x)	0.78	This is 1.94% less than the New England Average
Sulfur Dioxide (SO₂)	0.42	This is 2.01% more than the New England Average

Notes: lbs/MWh = pounds per Megawatt-hour
1 Megawatt-hour = 1,000 kilowatt-hours

Additional Information and Required Notes:

Power Sources—Maine law requires retail electricity providers to periodically provide information to their customers on the mix of power sources used by the provider to serve their Maine customers' load.

Emissions—Carbon Dioxide (CO₂) is released when certain fuels are burned. It is considered a greenhouse gas and a major contributor to global warming. Nitrogen Oxides (NO_x) form when certain fuels are burned at high temperatures. They are considered contributors to acid rain and ground-level ozone (or smog). Sulfur Dioxide (SO₂) is formed when fuels containing sulfur are burned. Major health effects associated with SO₂ include asthma, respiratory illness and aggravation of existing cardiovascular disease. The production of electricity can produce other harmful emissions and have other environmental impacts. Environmental impacts differ among individual power plants.

If you have questions or need further explanation, please contact Maine Public Utilities Commission, toll-free, at 1-800-452-4699. Additional information can also be found at <http://www.maine.gov/mpuc>.
